CAMLOG Foundation – Relunched and Independent

The CAMLOG Foundation was established over ten years ago. Its goal has always been to create and disseminate knowledge by funding research projects and further education, as well as sponsoring young scientific talents. A central focus has been the exchange of specialist knowledge in the field of oral implant dentistry and related areas among scientists, practitioners and the industry. All of which is to the benefit of patients. To date, the CAMLOG Foundation has financed more than 140 scientific projects, studies and grants, and is promoting continuous training and further education. The Foundation Research Award, which is awarded every two years and endowed with EUR 20,000, has become well established over the years.

We are now preparing for the future with the relaunch into the **Oral Reconstruction Foundation**. The resulting independence opens the Foundation for other fields in dentistry and for cooperation's with various companies in order to also guarantee the development of research in the field of oral reconstruction. Additionally it is our goal to strengthen and expand our position as global continuing education provider. In April 2016, the partner foundation, "Oral Reconstruction Foundation - U.S. Section", was founded.

And, of course, we remain faithful to our commitment to "**Science – Education – Patient**". This ever-present interaction is reflected by our new logo.

The Oral Reconstruction Foundation is a foundation established by scientists under Swiss law. Its purpose is the sponsoring of research projects, of basic and applied research, as well as training and further education in the field of implant dentistry and related areas. Furthermore, it supports the promotion of scientific exchange between universities, practitioners and the industry in the field of implant dentistry and related areas. Clinical research and teaching are focal points, in particular for the benefit of patients. The support of young talents is a central interest of the Oral Reconstruction Foundation.
